## HALF DAY WORKSHOP: Introduction to Refactoring with Resharper

Refactoring is something we all do whether we know it or not. I found that focusing on documented techniques (like in Refactoring to Patterns) and using automated tools has enhanced how I evolve code. One tool I've fallen in love with is Resharper. I've actually had days where I didn't have it installed (offline traveling) that I would just give up doing any work. The experience in VS is just not the same with out it. It's not necessary to refactoring but it does speed up the process and provide safety from the common mistakes when "manually" refactoring. Simple things like renaming variables, inlining or introducing methods can be done without touching the mouse!

This workshop is intended for those who aren't very familiar with patterns in refactoring and/or aren't familiar with using Resharper to assist in this process.

First we'll start with a general introduction to using resharper (30-45 minutes). Then we'll step through about 15-20 basic to intermediate refactorings, discussing when they are beneficial and doing hands on examples on sample code (3 hours). Toward the end (maybe 30-45 minutes depending on time) I will allow people to bring refactoring questions in existing code bases and we can discuss how to approach it and how resharper can make the job easier.

Time: 8:00 AM - 12:00 PM  
Room: U10

### Wesley McClure

I love developing software and developing the process of developing software! Nothing makes me happier than delivering solutions to customers that help expand what they can do and take their business to the next level!
